

Online Phone List

The group has an online phone contact listing.

- Contact info is stored online in a private Google Sheet
- The data content is easily and immediately updated from a mobile phone
- Contact info is protected by mobile phone authentication. Only those on the list can get access to the list.
- To dial someone on the list, simply press their telephone number to immediately dial from your mobile phone.
- Press the Green Text Page icon to send a page from your mobile phone
- The blue "Surprise Me !" button grabs a name from the list at random. (You get a chance to confirm the person is available, before making the call, etc...)
- Because this runs in the browser, there is no app to download from Google Play or the Apple Store.
- Phone listing is available on any mobile device, tablet, laptop or desktop computer.

The web address for the specific page that contains the phone list is

https://loseweight.vegas/#phone_list

The display shown here (after successful login).

Eff: 21 Sept 2019, the link is now secure. Note the https in the address above. The display at the top of the screen will include a lock icon.

Here's what you would see before authentication, or if you are not an authorized user.

- To start the login process, enter your phone number.
- The app may ask for a Google reCaptcha (select all the squares with...)
- Finally the app will reply by sending a verification text page to your mobile phone.
- Enter the code provided on the login screen.
- Continue, and the app will be live on your phone.
- You can also use the app on a desktop, with phone authentication.

For ease of use, consider adding the link to your home page. Nothing to download. It looks like a traditional app, but its really just a simple link.

Instructions:

- Click on the share icon (a rectangular box with an arrow pointing up)
- Search for the “Add to Home Screen” button

- When you add the link to the home screen, best to give it a short name.
- Finally, the link appears on your home screen just like an app icon
